

# Manual and important information for the minimalist Outdoor Shower

by Tarantik & Egger

## Assembling your shower

Dear shower owner. Please handle the bayonet joints of your new shower with care. They are precisely manufactured parts. To make sure the parts of the shower connect tight it is important that the joints are not damaged when assembling or demounting the shower.

Take a look at them to see how they work. Grease them with the grease in the package.

Connect the pipes carefully in a straight way. Interlock the bayonet joints by turning the pipes 90° clockwise.

**Don't apply too much force. The joints must interlock easily.**

To demount your shower hold the pipes close to the joints. Then turn them carefully 90° counter clockwise. Pull the pipes apart slowly and straight.

Enjoy.
